Microsoft's Latest and Greatest OS is Here

Windsor ON - On October 22, Microsoft will officially release Windows 7, its new and improved operating system. The new release is no stranger to the team at Next Dimension: they've been test driving Windows 7 since the beta release in January 2009, and are quite pleased with the new interface, improved performance, and robust features.

"Speed and stability have improved enormously in Windows 7. It's easier to use and much more efficient, making it a good choice for organizations in need of responsive, stable desktop systems" according to Andrew Lozier, Next Dimension co-founder and Chief Architect.

With Windows 7 Enterprise, companies can take advantage of features like Federated Search which allow users to find information, even in remote repositories and SharePoint sites, fast and with ease. Other features of interest to business users include BranchCache, which can increase productivity by speeding up network responsiveness of applications for users in off-site locations. BitLocker and BitLocker-To-Go provide an easier way to protect data on portable computers and removable drives. In today's business landscape, productivity and security are critical to a successful operation.

Next Dimension is a Microsoft Gold Certified Partner, and can answer questions on Windows 7 as well as book appointments for live demos.

About Next Dimension

Founded in 1997, Next Dimension is the provider of choice for clients looking to maximize/optimize the return on their IT investment. As the area's largest IT services company, Next Dimension has built its reputation on a heritage of delivery excellence, industry knowledge, and a strong technical infrastructure which is largely a reflection on the quality and expertise of its people.
